EXPERIENCE

Data Engineer Intern

Jan 2026 – Present

Shopify

Toronto, ON

- Reduced projected raw GraphQL telemetry costs from **\$3–5M/year** to **approximately \$300K/year** by building **Flink** pre-aggregation pipelines for **14B+ daily GraphQL requests** and **4+ PB/month** of raw telemetry, storing **less than 1%** of the original data volume for downstream analytics
- Built an internal **AI assistant** for **API rate-limit investigations**, automating first-pass request analysis and enabling engineers to resolve reviews faster while saving an estimated **10+ engineering hours/week**
- Automated cleanup of legacy and unused dbt models in Shopify's analytics warehouse, reclaiming **20+ TB** of storage and saving **\$30K+ annually** while improving warehouse maintainability
- Led the migration of a team data repository into Shopify's **monorepo**, standardizing development workflows and enabling internal AI tooling to access, review, and support dbt/data engineering projects
- Developed an **MCP-powered search tool** for Shopify's internal Data Notebooks platform, making existing Marimo notebooks and analysis sites discoverable so teams could reuse prior work when starting new investigations
- Created internal Claude AI skills for **dbt model review** and documentation, helping the team catch style, syntax, and business-logic issues in new and existing models before production deployment

Software Developer Intern

May 2023 – Aug 2024

INVIDI Technologies Corporation

Edmonton, AB

- Played a key role in designing and executing the migration of production databases from Ignite to **PostgreSQL**, enabling a shift from single-tenant to multi-tenant architecture and significantly improving scalability and operational efficiency
- Developed **Python** automation scripts to adjust distributor permissions in bulk, replacing manual updates with a reliable process that improved compliance and reduced operational time by **10%**
- Provisioned **AWS** (RDS, EC2, S3) resources and **Datadog** monitors with **Terraform**, automating deployments and reducing environment setup time
- Provided on-call support for production environments by monitoring alerts and analyzing logs to diagnose and resolve incidents, improving system availability and reliability

Data Analyst Intern

Jun 2022 – Jul 2022

Abu Dhabi Islamic Bank

Abu Dhabi, UAE

- Analyzed **1000+ customer transaction records** using Python and SQL to identify patterns in savings and spending behaviors, which improved targeted marketing efficiency by **10%**
- Designed and developed 5 interactive dashboards in **Power BI** to visualize customer segmentation, retention trends, and loan performance, leading to an increase in decision-making efficiency for the analytics team

SKILLS

Languages & Data: Python, SQL, Java, Kotlin, dbt, Airflow, Flink, BigQuery, ETL/ELT

Cloud & Tools: AWS, GCP, Kubernetes, Docker, Terraform, CI/CD, Datadog, GitHub, Bitbucket, Postman

EDUCATION

University of Alberta

Sep 2020 - Jun 2025

Bachelor of Science Specialization in Computer Science

Edmonton, AB

- **Coursework:** Data Structures and Algorithms, Natural Language Processing, Artificial Intelligence, Machine Learning, Object-Oriented Programming, Databases, Web Development

PROJECTS

AceMe – AI-Powered Study Assistant | *Flutter, Dart, Firebase, Gemini API*

- Built a cross-platform mobile app to help students plan their studying, summarize notes, and generate personalized quizzes using Flutter, Firebase, and the Gemini API
- Integrated mental well-being resources and AI-powered mindfulness support to help students manage academic stress alongside their study workflows
